

Environmental Policy

Robert Bird Group recognises the importance of a resilient and regenerative environment and the need to halve global emissions before 2030 and achieve net-zero before 2050. We look to promote and protect these sustainability core values in all our business activities as our industry adapts to reverse global warming and biodiversity loss.

Commitments

Set near- and long-term company-wide emission reductions in line with science-based net-zero with the SBTi:

- 50% reduction in scope 1, 2 and 3 emissions by 2030
- Reach net-zero by 2050

Minimise our environmental impacts to prevent pollution and protect the environment.

Promote sustainable solutions and efficient use of natural resources in our projects and operations.

Promote and support local biodiversity on our projects.

Through our ISO 14001 certified management system:

- Monitor and continually improve environmental performance
- Develop and implement plans to achieve the commitments communicated in this policy
- Comply with all relevant legislation and other requirements we subscribe to

To achieve our commitments, we will

Monitor embodied carbon across all our activities and take effective measures to reduce our footprint.

Implement an environment centred engineering philosophy on all our projects with low carbon and adapting to the impacts of climate change at its heart.

Engage with clients, partners and other stakeholders to reduce the carbon intensity of our designs.

Engage with clients, partners and other stakeholders to identify opportunities for sustainable development and to manage environmental risks.

Prioritise working with clients, partners and suppliers whose environmental commitments are consistent with our own.

Ensure our people have the knowledge, experience and behaviours to deliver in a manner that can sustain our living environment.
